

RBC Emerging Markets Small Cap Equity

Quarterly Commentary

Emerging market (EM) equities had the worst quarter for the asset class since 2015. Geopolitics has now replaced central bank actions as the most important driver of global markets. It has been the see-sawing of US/North Korea relations alongside the escalating US/China - and now global - trade tensions that have been at the forefront of investors' concerns. In addition, we saw the US 10-year Treasury yield breach 3% for the first time in almost five years, which – combined with US dollar strength – has driven a sell-off across EM currencies with the most vulnerable markets, namely Argentina, Brazil and Turkey, hardest hit. Several EM central banks hiked interest rates in response.

All sectors finished the quarter in negative territory with defensives outperforming cyclicals due to increased risk-off sentiment in markets. The most resilient sectors were energy, health care and IT, while financials, real estate and industrials fared the worst. At the country level, Colombia and Qatar were the only EM markets to finish the quarter in positive territory, while Brazil, Turkey and Pakistan were the worst performers. Colombia and Qatar have been benefiting from a strong oil price.

At the country level, stock selection contributed positively to relative returns, however this was partially offset by top-down positioning. Stock selection in China and India was particularly strong, while our underweight positions to China and Taiwan negatively impacted relative returns. At the sector level, top-down positioning drove outperformance given our more defensive positioning. That said, stock selection overall dragged on relative returns at the sector level, in particular within consumer discretionary and IT.

Description of the Firm: For the purposes of Global Investment Performance Standards (GIPS®), RBC Global Asset Management is the asset management division of Royal Bank of Canada (RBC), operating under the following brands: RBC Global Asset Management (RBC GAM) in Canada, the U.S. (institutional), the U.K. and Hong Kong; Phillips, Hager & North Investment Management (institutional); and BlueBay Asset Management (institutional). With offices around the world, RBC GAM offers a full range of global investment solutions in cash management and fixed income, equity, balanced, alternative and specialty investment strategies through mutual funds, hedge funds, pooled funds and separately managed accounts. The RBC GAM group of companies has more than C\$417 billion (US\$331 billion) in assets under management as at December 31, 2017. RBC purchased Phillips, Hager & North Investment Management, including the assets of BonaVista Asset Management, on May 1, 2008, and BlueBay Asset Management on December 17, 2010. A complete list and description of the firm's composites and performance results is available upon request.

Compliance Statement: RBC GAM claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. RBC GAM has been independently verified for the periods January 1, 2002 through December 31, 2017. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Emerging Markets Equity - Small Cap (USD) composite has been examined for the periods July 1, 2013 - December 31, 2017. The verification and performance examination reports are available upon request.

Composite Description: The Emerging Market Equity - Small Cap (USD) Composite includes all portfolios that invest in emerging markets equities of small-cap companies managed by RBC GAM directly.

Benchmark: The benchmark is the MSCI Emerging Market Small-Cap (net of taxes) index. The Index is designed to measure the equity market performance of emerging markets with a focus on small market capitalization companies. Index returns are provided for comparison purposes to represent the investment environment existing during the time periods shown. An index is fully invested, includes the reinvestment of dividends and capital gains, but does not include any transaction costs, management fees, or other costs. Holdings of each separately managed account in a composite will differ from the index. An investor may not invest directly in an index.

Gross of Fees: Gross of fees performance is presented gross of all fees, but after all trading expenses. Returns are presented net of withholding taxes on dividends, interest income and capital gains where applicable.

Net of Fees: Net of fee performance is calculated using the maximum stated annual fee of 1.15% calculated and applied monthly.

Performance Calculations: Results are based on all fully discretionary accounts meeting the composite definition, including those accounts no longer with the firm. Returns are shown in U.S. Dollars, and include the reinvestment of all income. Performance shown for the Emerging Markets Equity Small Cap Composite is based on information generated by RBC Global Asset Management's internal performance systems, which may differ from the performance shown in official books and records of certain investment funds which form a part of the composite. Official books and records for certain investment funds which form a part of the composite include the impact of a fair value for market timing that is applied to certain securities as of the close of trading for the fund. For the purposes of calculating the Emerging Markets Equity Small Cap Composite, we prepare a separate performance stream for such funds that eliminates the impact of this fair value adjustment. This second performance stream is used to calculate performance of the composite in an effort to better align the methodology for calculating composite performance with the methodology applied to calculate the benchmark. Additional information regarding policies for valuing portfolios, calculating performance, and preparing presentations is available upon request. Past performance is not indicative of future results.

Composite Dispersion: The composite dispersion of annual returns is indicated by the performance of individual accounts representing the equal weighted standard deviation of returns. Dispersion of returns is calculated for portfolios included in the composite for the full year.

3-Year Standard Deviation: Periods with less than 3 years of data will show "n/a".

Derivatives, Leverage and Short Positions: The portfolios may use derivatives for hedging purposes, and may also use derivatives such as options, futures, forwards and swaps for non-hedging purposes as a substitute for direct investment, as long as the portfolio's use of derivatives is consistent with its investment objectives. Currency hedging is used primarily as a risk management tool to limit the volatility of portfolio returns and may be used tactically to enhance returns. Currency hedge ratios can range between 0-100%, depending on asset class and mandate. No leverage has been used in any of the portfolios contained in the composite.

Fee Schedule: The management fee schedule is as follows: For U.S. clients: 1.15% for the first US\$50mm, 1.05% on the next US \$50mm, and 1.00% for all assets over US\$100m. Advisory fees are described on this page and on Form ADV Part 2A. RBC GAM reserves the right to negotiate all advisory fees.

Minimum Account Size: Currently there is no minimum account size in order to be included in this composite.

Creation Date: This composite was created on July 1, 2013 and has an inception date of July 1, 2013.
